

Bird Flu and You

What to do if you see a dead bird!

Many people are asking what to do if they see a dead bird. That's because they have heard about a severe bird flu called H5N1 avian influenza. They have heard that some people may have gotten sick from touching sick birds. Other people have gotten sick from living in areas with lots of droppings from sick birds. Right now, this bird flu is not found anywhere in the United States.

Even if bird flu does not come to the U.S., it's important to know that bird flu is hard for people to catch. Bird flu does not easily infect people.

It's also important that you know what to do with a dead bird. Many diseases can cause birds to become sick. Birds carry germs that can make us sick. Because it is difficult to tell why a bird died just by looking at it, it is best not to touch it. Here are some other things that you can do:

If you find a dead crow, call 1-866-537-BIRD.

- Dead crows help track another disease that kills birds, the West Nile virus.
- Report all dead crows, whether it is only one crow or a group of them.

If you find many dead birds, other than crows, in the same place, call your regional office of the New York State Department of Environmental Conservation (DEC).

- DEC will decide if the dead birds need to be picked up and tested. This may be based on what kinds of birds you have found.
- The bird flu usually involves ducks and geese, not backyard birds.
- You do not need to report dead birds, other than crows, **unless** there are many dead birds in the same place.

If you must dispose of a dead bird, wear gloves and pick it up with a shovel.

- Put the dead bird in one bag and put that bag in a second bag.
- Then, throw it out in the trash. Or bury it away from a stream or water source.
- Wash your hands and tools with soap and hot water immediately.

Don't get worried when you see a dead bird. Get the facts!
